Astronomical Notes

OBSERVATORY OF VASSAR COLLEGE. The computations in the following Although only approximate, they will enable the ordinary observer to find the planets.

On October I Mercury rises at 5h 4m. A. M., and sets at 5h. 38m. P.

On October 31 Mercury rises at 8h A. M., and sets at 5h. 27m. P.M. Venus. On October 1 Venus rises at 5h

14m. A. M., and sets at 4h. 34m. P On October 31 Venus rises at 3h. 11m. A. M., and sets at 3h. 9m; P.

The motions of Venus can be watched by referring the planet's places to the stars in Leo, and it will be seen that Venns moves toward the west un-til the 14th, and toward the east after that date. Venns is near the waning moon on the 12th, and at its greates brilliancy on the 30th.

Mars. for evening observers.

P. M., and sets at 10h. 12m. of the next day. On October 31 Mars rises at 5h 39m.

west; it can be compared with the stars of the Pleiades. Mass is in conjunction with the moon on the 30th. Jupiter.

Jupiter, Satura, und Mars are brilliant in the evening of October.

Jupiter rises first: on October 1 at 4h.25m. P.M., on October 3d at 2h.

An ordinary ship's glass, or a good of the worst blow that John Kelly, opera glass, will show the varied positions of Jupiter and its four moons. ceived is that dealt in the decision that If we take the hours between 8 and 10 Tammany is to have no inspector of in the evening for our observations we section this year. It is held by the shall see Jupiter rise, unaccompanied learned connect that have been controlled by the statellite, on the 5th, in conrequence of the satellite coming in front of the planet and passing across tion of each party may be represented the disk. It her reading had been different, so we venture to say, would have been her actions and her fate. "Figs do not bring forth thorns, nor grapes

## An Incident.

Just as the party was re-entering the carringes at the race course Thursday, to proceed to the depot, General Abe Buford came forward and was introduced to General Sherman. The latter recognized General the planets. M. M. Buford at once, and, taking him by restrion of planets for october, 1879 both hands, said, "Why Abe, how are you, old fellow? I am very glad to see you, which sentiment was reciproceed by Gen. Buford, who said, 'Yes, I well remember the time you, Nat Gaither and Wickliffe tried to haze me when I entered West Point.' With a smile the President said.
With a smile the President said.
Well, General, did he maze you?
"No, sir." replied General Buford,
I hazed them. They tried it, but did
not succeed.' A hearty laugh ensued,
and after a few more words of conversation between the leaders of the blue and the gray, the party left the grounds-Lexington Transcript.

## An Argument Against Round-Dancing.

|Gallatin Tennescan.l The following from Will S. Hay's 'Old Ike" to his daughter, might be read with profit by some young la-Mars.

Mars is coming into better position or evening observers.

Mars rises on October I at 7h. 57m., P. M., and sets at 10h. 12m. of the Cart day.

On October 3I Mars rises at 5h 39m. On October 3I Mars rises at 5h 39m. hotels and udder public places kick-p. M., and sets at 7h 56in. A. M. of hotels and udder public places kicking up yer heels and letting dat nigger squeeze you in the presence of the next day.

After October 6 the motion of Mars decent people. You quit dat—you among the stars will be toward the kotch dat from de white folks, an I don't low it no mo.

An Argument for Round Dancing

[Gallatin Termesran.]
A lemon is of no practical use until it is squeezed; likewise a girl.
Hence the round-dance.

The following paragraph from the Philadelphia Times explains itself: 21st and 28th.

She first satellite will go invisible at some time during these hours on the 6th and 29th, because it is in the votes. True, the regular Republican shadow of the planet. On the 20th it is inspectors might be led into the secret will not be seen because behind the

will not be seen, because behind the of an inspector's duties to his party planet. The smallest satellite of Jupiter, the would be to give the enemy ammuni second in order of distance from the tion that might be used against the planet, well not be seen until near 10 Democracy next year. A better plan P. M. on the 7th, when it passes from would be to import some Republican the face of the planet. It will disappure and the purity of the ballot from Philadelphia, and let them open cause it passes between the planet and the earth and is thus projected upon the face of Jupiter.

The thur stellite of Teniter which The third satellite of Jupiter, which give even Tammany inspectors valis the largest, will disappear by going unble points of the work of the higher behind the planet, October 9. The applications of the modern order of Ballot-

HOPKINSVILLE. Scholastic year, two terms, twenty weeks each. Fall term begins Monday, AUGUST 25th, 1879.

The cut shove illustrates a Grain Drill, which we think will meet the wants of the grain producers of the South and West, and prove to be what they have so long been waiting for, vis: A strong, simple, effective drill, that does not require skilled labor to manage, or a machinest to be on hand with his tools ready to repair, or a practical engineer to explain its complicated machinery, and show how it is to be operated. This Drill will work in lands where other drills will fait. It can be easily managed by any one capable of

where other drills will fail. It can be easily managed by any one capable of driving a pair of horses or mules, and is eminently adapted to corn lands and lands with a heavy growth of weeds turned under.

Not a cog-wheel, not a belt, no complication, no bother, no breaking of pins and putting in new ones, no stopping to clean out trash, weeds, stalks, sods, clumps, stones and roots. The steel springs rile over any obstruction the edge of the shoe can not divide, and the shoes, instead of gathering like a rake all the trash before them, leave it behind and clear themselves.

The springs attached to the hoisting bar and to the front of the shoes allow the shoes to conform to the inequalities of the ground, and at the same time hold them down steady to their work, securing an unequaled uniformity in the depth of the furows, depositing the grain at the proper germinating point.

We are happy to announce to our patrons that we have added to our Spring Drag Drills a Fertilizer Attachment for sweing bone dust, phosphates guano

Drag Drills a Fertilizer Attachment for sweing bone dust, phosphates guano and plaster in the furrows with wheat. We have studied to make this improvement so as to present the same simplicity of construction and case of management already found in our Grain Grill; not a cog-wheel about it; the motion is very simple, and the flow of the Fortelizer under perfect control of the driver without moving from his sent. white printed against the company of the foreign and at the contents willy

We are also agents for this old and well established drill. Over 500 are in use in this se tion. We refer you to them with pride, knowing that they will give you entire satisfaction,

WILLOUGHBY

We are also selling the Willoughby Grain and Fertilizer Drill. In many sections of the country, where this drill has been used longest, none other can be sold. It is a good drill and deserves a liberal patronage. Call and see us, or address us at Clarksville or Hopkinsville: 114 and
